First Place Winner at Qimma
Hackathon

Taimullah Kellizy

Full-Stack Developer making the web work in Arabic (RTL & i18n) |
React · Next.js · Node.js | Built Arabify (1st at Qimma Hackathon) &
Meridian, an open-source i18n suite | CS student
Damascus, Damascus Governorate, Syria

Summary

Most websites still treat Arabic like an afterthought. I'm a full-stack developer and CS student in Damascus, building tools that fix that. Arabify, my open-source Arabic-readiness tool, won 1st place at the Qimma Hackathon. Meridian, my open-source i18n suite, turns any React app into a global-ready product with one command: string extraction, translation, RTL-safe CSS. About 400 million people speak Arabic, yet many products still ship broken RTL layouts and half-translated interfaces to them. That gap is where I work: React and Next.js front ends, Node.js and Python back ends, and localization done as engineering, not as an afterthought. I also keep ideas moving between languages: Language Supervisor and AI Dubbing Specialist at TED Translators (Arabic/English quality assurance), and Content Lead at Unblock Syria, where I localized 1,500+ Arabic/English strings, coordinated a team, and earned 5 volunteer badges in under 3 months. Open to software engineering internships in full-stack, front-end, or localization engineering. Reach me at taimkellizy@gmail.com.

Experience

Unblock Syria

5 months

Software Engineer

August 2026 - Present (3 months)

Contribute to the development of Unblock Syria's web and browser-based tools, working directly with the project team on product features, reliability, and tester workflows.

Develop and maintain the شغال browser extension using React and TypeScript, including service testing, reporting, corrections, screenshots, API integration, and Arabic/RTL localization.

Build component and end-to-end test coverage with Vitest, Testing Library, and Playwright, and integrate testing into CI.

Investigate bugs and API integration issues, design implementation approaches, and collaborate on technical decisions and product improvements.

Contribute to release readiness and prepare the project for public open-source development.

Content Team Lead

June 2026 - Present (5 months)

Lead localization and bilingual content for a non-profit reconnecting Syria with the world — services directory, articles, and company data for Syrians at home and abroad.

- Localized 1,500+ strings across the platform in Arabic and English
- Translated and reviewed 15+ transactional emails (account, notification, and service flows)
- Coordinated a team of translators, reviewing their output and keeping terminology consistent
- Earned 5 volunteer badges in under 3 months: Byline, On the Map, Leader, Red Pen, Mother Tongue
- Volunteer page: unblocksyria.com/en/volunteers/taimullah-kellizy

Education

Modern University for Technology & Information - MTI

Bachelor of computer science , Computer Science · (September 2025 - June 2029)
